Group name: CYBER G-LIFE

All of the team members will have *write* access to *merge* GitHub branches, pull requests, and content updates. However, we will discuss and check before pulling ideas, and only after the whole group members think there is no problem, we will pull respectively.

      Java:

Project topic:A Good Day for Different Ages

Introduction:
      We are going to use javascript to code an art website to introduce art. The topic of our website will be A Good Day for Different Ages. As we know, art can be characterized by many forms and many types, people in different countries have different styles and also time changes how we define art. Also, the definition of a good day changes in different ages. By simulating AR technology, our ideas can achieve the same vision and artistic unity even in different ages. So far we decided to make an art website to illustrate the ways and expressions of art in 5 different ages and post some artworks and articles about "A Good day for each age". In the plan(might change at later), there will be one main page with 5 subpages. The main page is a cover with some simple introduction and each subpage presents a different artistic representation from each era respectively which is selected by team members.
